OPUS NO. 3

THE THIRD YEAR

COMPOSED BY

MONTANA

HEALTH SYSTEMS AGENCY

August 23, 1979

Montana State Library

3 0864 1005 0115 7

PRELUDE TO AN ANNUAL REPORT

Last year, the second year of conditional designation, our annual report was entitled "The Two Year Old." Incorporated in that report were:

The Background Public Law 93-641

The Findings of Congress

Communications

Purposes

Functions

Coordination

Health Systems Plan

Annual Implementation Plan

Plan Implementation/Review

Appropriateness

Plan Implementation

Data Management

Indian Tribes

Accountability

The Volunteers

"The Two Year Old" is our primer, a basic educational tool. We shall continue to use it in the future, but for now it's graduation time for the Montana Health Systems Agency. In the beginning of our third year we had accomplished our full designation. It was time for a new theme

1979 OVERTURE TO HEALTH

Opus 3, the THIRD YEAR

-- A new composition with many voices, louder, clearer voices -- many themes, some simple, some complex -- more participants -- more sections in the systems -- improved orchestration, sometimes harmonious, oftentimes cacophonous, and intermittently a tintinnabulation of soft counterpoint as the various forces weave their ways rhythmically and arrhythmically through the maze of procedures, policies and regulations.

With all the diversity of the participants, the complexity of the law, the proliferation of the amendments, the profusion of the regulations, the paucity of the guidance, the magnitude of the libretto, it should have been predestined that the National Health Planning and Resources Development Act be set to music. Music, the international language. Everybody can understand it. It's touted to be the soul of the universe, and to solve our health problems a moving spirit and an underlying, yet overriding conscience is sorely needed.

Supposing we had pursued our first health systems plan via musical score, a symphony orchestra with nurses in the string section, physicians in the brass, hospital and nursing home administrators in the percussion, other health providers in the woodwinds and consumers in the chorus. And the poor composer? Showered by a multitude of themes, all with one basic chant --

The image shows a handwritten musical score on four staves. Each staff begins with a treble clef and a key signature of one flat (B-flat). The first staff has a 4/4 time signature. The lyrics are written below the notes. The music consists of simple, repetitive melodic lines.

IT'S GOT-TA BE A-VAI-LABLE GOT-TA BE ACCESSIBLE

GOT-TA BE ACCEPTABLE LOW COST LOW COST

YOU MUST IM-PROVE THE QUALITY HEIGHTEN CONTINUITY

LESSEN SUPERFLUITY LOW COST LOW COST

The paucity of guidance would have left the poor composer with his guidelines looking like

his criteria a shambles

his “quantitative” a mere speculation 3/4 12/8 4/4 6/8 2/4 ?/5 7/?

his “time specific” an uncertainty

1st theme (component) - ?

measures (datelines) - ?

2nd theme (component) - ?

measures (datelines) - ?

his searching for a key -- a horrendous problem -- what about the key?

Since we must be very sharp in this commitment, why not the key of B sharp (B[#])?

The obvious is also the paradox - B[#] is the most complex of the keys

These trail signs alone would bring instant paralysis to even the most accomplished performer.

In such an instance we dare not D spare, we must B natural, reduce all to the lowest common denominator, to the community, to the local circumstances, to the citizen.

Having done that, to all extent possible, we may exclaim EUREKA! The amazing discovery --that very complicated key of B[#] is the same as the uncomplicated, most basic key, C. C for completely natural, C for confidence, C for constant, coping, continuity, cooperation, consonant, canonical, catalyst, clairvoyance, concentration, conceptual, concurrence, constructive, corrigible, credibility, and C for community.

This is not an attempt at frivolity. There have been those many moments in the past three years when the barrage of opinions and statements, oftentimes diametrically opposed, appeared to be answerable only by some musical utterance. Opinions and statements such as:

New hospital services, or technologies, have been increasing at an annual rate ranging between four and seven percent.

Prior efforts at all levels to contain technological expansion, and, therefore, costs have been impaired because they were based on guesswork.

Problems of the health care system include maldistribution of health care personnel and resources, lack of adequate health care insurance coverage for a large part of the American population, and proliferation of "inappropriate and underused," but highly sophisticated technology.

The dilemma is the conflict of moderating costs and the consuming interest of society in making widely available the most sophisticated technology that medicine can offer. Government is the major force pushing in these opposite directions.

New technologies save rather than cost more money. If we limit the availability of technically advanced medical modalities the effect will be to encourage more labor-intensive procedures, and total health care costs will actually increase.

Having made its findings during the drafting of Public Law 93-641, the Congress put forth three major points for Health Systems Agencies (HSAs), the "A, B, Cs," purposes, functions, and coordinative requirements, or, musically speaking, the first steps, the "E, F, Gs,"

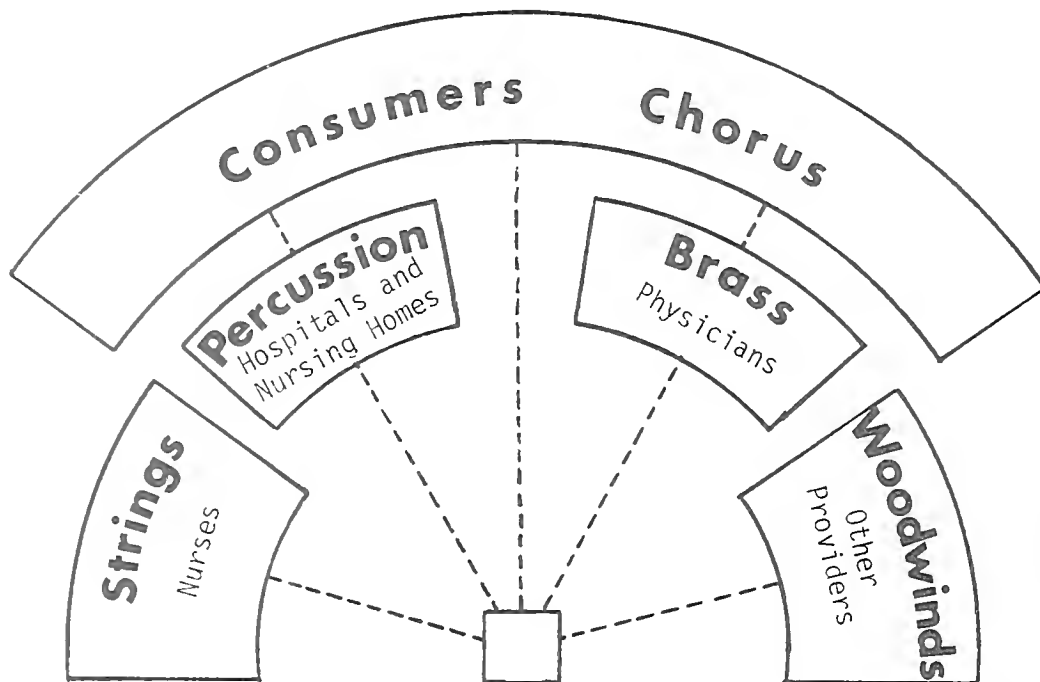

Three small steps (notes) in a very complex undertaking within the framework of an extremely complicated law, further entangled by the intricacies of a single HSA state like Montana. Like handing three small notes to a composer with the demand for a three movement symphony.

Montana, with all of her 148,000 square miles, her 764,000 inhabitants, her amazing but often threatening splendors, her breathtaking barriers, her inviting corridors of nature, her frightening storms, her tranquilities, her potentials, her needs, her demands, her values, her judgments. Collectively, they assume a momentum all their own, they establish a basic rhythm. You can almost hear the Rhapsody. In a very simple style, the opus will be developed in parallel with this annual report.

Before the reporting and the composing, let's meet the two hundred and fifteen active performers, take a look at all of the reviews we've conducted this year and our financial report.

Our Montana Health Systems Agency performers (providers and consumers) make up the following sections of orchestrators:

Chairman - Bryce Hughett, M.D.
Vice-Chairman - Sharon Diezger
Secretary-Treasurer - Jack B. Dodd

By Public Law 93-641 this Governing Board is constituted strictly as to its membership and its responsibilities. Included in those responsibilities are: The internal affairs of the agency, the establishment of a health systems plan and annual implementation plan, the approval of grants and contracts from the Area Health Services Development Fund, the approval of all actions taken pursuant to subsections (e), (f), (g), and (h) of section 1513, the issuance of an annual report, the reimbursement of its members for reasonable costs in attending its meetings, meet at least once in each calendar quarter of the year, and conduct those meetings in public giving adequate notice to the public and make its records and data available, upon request, to the public.

This group of orchestrators (policy makers) is all volunteer. The meeting time requirements are arduous and preparation requirements are extensive and intensive in order to accomplish the broad-based understanding required for sound decision making. Then, too, the Board spawns a number of ensembles (committees, subarea advisory councils, task forces) which are very demanding in both meeting and preparation times. It is here, in these ensembles, that the Board's themes are developed and returned to the Board for its recapitulation, consideration and adoption. These ensembles put the body on the framework, the meat on the skeleton, the proof in the pudding, the harmony to the melody.

ENSEMBLE (Committee)

MAKEUP FOR THE YEAR 1979

EXECUTIVE COMMITTEE

Statewide Health Coordinating Council

Bryce Hughett, M.D., First Chair

John Allen

John Bunger

Missoula Community Hospital, Msls Replace Dynacolor 415	Non-reviewable	65,000.			
Powell County Memorial Hospital, Deer Lodge Remodel Lobby Area to Comply with Standards	Abbreviated Approval	55,000.			
Trinity Saint Rose Hospital, Billings Replace X-ray Equipment	Abbreviated Approval	135,000.			
St. Patrick Hospital, Missoula Solar Energy Program for Hot Water Demonstration Project	Abbreviated Approval	220,000.		Total Approved Total Non-reviewable	\$4,675,427. 81,700.
Michael Manning Hospital, Dillon Replace X-ray Generator and Image Intensifier	Abbreviated Approval	86,000.			\$4,757,127.
			*Both Certificate of Need and A-95.		

THE FINANCIAL REPORT

Financial reports are prepared monthly and demonstrate budget pace, spending pace and excess of budget pace over spending pace.

The system is a double entry bookkeeping system with a daily ledger and a monthly ledger. A chart of accounts is utilized for each individual income and expense incurred by the MHSA.

Payroll is performed on a semi-monthly schedule with reports to Federal and State Governments, the Unemployment Insurance Division and the Workmen's Compensation Division.

Quarterly reports are submitted to the Regional Office of the Department of Health, Education, and Welfare.

Statement of Revenues and Expenditures — Federal and State Grants For the Fiscal Year August 23, 1978 through August 22, 1979 (Unaudited)

REVENUE		EXPENDITURES	
Federal grant	\$365,532	Personnel	\$194,333
State grant	52,682	Payroll taxes	16,031
		Employee benefits	20,860
		Consultants	5,292
		Supplies, printing, general	41,974
		Travel	89,318
		Rent - space & equipment	24,990
		Telephone	8,886
		Postage	6,262
		Data management	600
		Public notices	3,145
		Insurance	2,230
Total Revenue	<u>\$418,214</u>	Total Expenditures	<u>\$413,921</u>
		Excess of Revenues over Expenditures	<u>\$ 4,293</u>

Statement of Financial Position August 22, 1979 (Unaudited)

ASSETS		
Current Assets		
Checking accounts	\$26,022	
Savings accounts	<u>80,131</u>	\$106,153
Other Assets		
Furniture and equipment	11,933	
Advances to employees	<u>400</u>	12,333

Federal grant balance - current fiscal year		4,293
Unliquidated obligations - FYE 8-22-79		<u>16,500</u>
Total Liabilities and Fund Balances		<u>\$118,486</u>

THE SCORE

In paralleling our annual report with a simple musical composition there can be demonstrated that with a few basics (purposes, functions, requirements), the musical "E, F, Gs", placed on a simple five lane road map for planning guidance (the staff),

we find ourselves in about the same posture as the Health Systems Agency was three years ago, a posture of vertigo.

What can be done with those three basics?

We can move them around until someone tells us to stop, and, as the new guy on the block, we were frequently so advised on numerous occasions.

Not very interesting,

no orientation (arrangement).

You don't have to be a musician, or even musically inclined, to know the score. Just follow along and observe the development as we learned more about our functions.

THE ANNUAL REPORT

Our standards began with the foundation of the program -- our ability to organize and perform our functions

AGENCY MANAGEMENT

our ability to know and understand the health status and the health system

DATA MANAGEMENT

these functions have fed into another function, output of which is a set of recommendations for changes in the health system which should take place in order to meet identified and desired goals

PLAN DEVELOPMENT

these recommended actions have provided the basis for the HSA's decisions and the decisions of others that are promoted by the HSA In other Health Systems Agency activities

PLAN IMPLEMENTATION/HEALTH SYSTEMS DEVELOPMENT PLAN IMPLEMENTATION/REGULATORY

Results of actions taken as a result of, or in concert with, the HSA are assessed in terms of this effect on health status of the population and on the health systems as described in the Plan.

THE SCORE

As goals are gradually stated and objectives selected and defined, our score begins to assume some structure and direction. Milestones appear (bar lines) clefs give us orientation, quantifiers tell us how far to go within each milestone, the same random notes, "E F G's," begin to take on form, substance and feeling -- a pulse is being felt.

From simple basics (core data) we can sense some direction. Vertigo is disappearing. We can start planning.

Now to inject some alternatives, we simply move up the ladder, building a format as we go

Our performers begin to take note and try their hand at their responsibilities.

DATA MANAGEMENT

In order to provide a readily understandable source of information, data management and analysis for the Montana Health Systems Agency, one of our realized objectives is the inclusion of computer capabilities. The Agency has access to a mini computer. Through the judicious use of staff in provision of technical assistance the HSA is constantly improving its capabilities by applying data automation to both planning and review programs.

Programs are being written to generate several of the utilization tables currently in the Health Systems Plan and a reporting system is being developed for the tracking of review activities.

The large amount of data needed to provide a meaningful picture of both health services and health status in Montana requires extensive compilation, verification and updating of data. The time and energy saving characteristics of a computer data system make for the efficient and accurate assemblage of updated information for planning purposes. Analysis capabilities will be expanded to provide the people of Montana, including the HSA decision makers, a greater depth and breadth to alternatives for their decision making.

Automating the statistics used in the review process has provided the MHSA with the ability to more readily and accurately provide decision makers with that information necessary for informed review committee input. Also available are comparisons of programs' past performances. This capability will be a valuable indicator in the MHSA review process.

Montana HSA staff, with technical assistance from consultants, has developed a usable computer capability. Concentrating on this "in-house" capability the HSA can continue to adjust data needs into a framework which relies on computer capabilities.

THE SCORE

In our planning we've continued to gain in credibility and experience some freedom of foci. Our board chairman, Bryce Hughett, has served in first chair position throughout these three years and has, no doubt, suffered many anxious moments in getting the HSA ensemble in tune.

Our basics began to spawn, then mushroom --

Now our momentum was carrying us.
Our horizons were expanding

Through cooperation, we began to enjoy the sweet
sounds of harmony

PLAN DEVELOPMENT

In its third year the Governing Board of the Montana Health Systems Agency approved its second Montana Health Systems Plan (HSP) on December, 1978. The Plan has received many very favorable comments. It has served, during the third year, as a basic resource document for seventy-nine reviews. We have no count on the number of preliminary applications that were "tuned off" due to the lack of conformity with the HSP. We have no measure of the extent to which potentially approvable applications were "tuned in" to the HSP and became better and better applications during the developmental process, a period during which the applicant was better able to perceive "needs," "wants" and "gots" through an improved understanding of long range implications of the HSP.

This past year, August 23, 1978 - August 22, 1979, has been a year of transition. There has been far less emphasis placed on the basic planning activities (the writing of components for the HSP), and increased emphasis on annual implementation projects (AIPs), data management and data presentation, and special studies.

With respect to the third plan scheduled for Board consideration and approval on November 2, 1979, only two components are being added:

- Federal Primary Health Care Programs
- Comprehensive Rehabilitation Programs

THE SCORE

Through communications more voices were being added, more sections of the systems were chiming in

With the development of policies, guidelines, standards, criteria -- everyone was getting to know the score. The composition was becoming more meaningful, more professional, full-bodied

Emphasis now, into the fourth year, will be on revising the present plan in order to address some necessary exceptions to the National Guidelines. The latest utilization data is being inserted into the tables with corresponding adjustments of 1985 estimations and expectations.

As to the Annual Implementation Plan (AIP), two projects from each of the five subarea advisory councils were identified and adopted by the Health Systems Agency. These ten projects included:

1. the presentation of a public discussion on Nurse Practitioners,
2. the studying of the feasibility of establishing a central, coordinating agency in Eastern Montana for health education and continuing health education efforts,
3. the compilation of an inventory of health education programs in North Central Montana,
4. a concerted effort to train 10% of the residents in North Central Montana in cardio-pulmonary resuscitation,
5. the sponsoring of several health education conferences in Stanford and Ryegate,
6. the sponsoring of a dental screening and prevention program in South Central Montana,
7. the development of an education program on generic drugs.
8. the promoting of a public awareness effort to increase use of nurse practitioners in Southwestern Montana,
9. the developing of a consumer referral service for health and social support programs in the Missoula area,

THE SCORE

Not everyone was cooperative. Some felt that the Health Systems Agency should "just go away"

Board Vice Chairman, Sharon Diezger, in her first chair position on the Plan Development Committee bore the brunt of many invectives in introducing the first Health Systems Plan and its first revisions.

But our melody lingered on, the values of good planning becoming increasingly evident, our score more flowing, more rhythmic, all health systems go --

10. the conducting of a feasibility study for the establishment of a family practice residency program centered in Missoula.

Adverting to special studies, these three small contracts were awarded to consultants:

1. A study of the economic feasibility of small communities to support a physician. (This study has been used to advise communities in the development of community projects, as in the town of Belt, and in the preparation of federal grant applications, as in Philipsburg. Results of the study were summarized in an HSP component.)

2. An inventory of alternative facilities for the aged. (This is being used as background for a \$61,000 study of alternatives to Montana's long-term care facilities and is being sponsored by the state agency, SHPDA.)

3. An inventory of health education programs in Montana. (This project was used by the SHPDA in the preparation of the State Health Plan (SHP) component on Health Education.)

THE SCORE

With our many review activities there has been, and will be, many opportunities for discord, disharmony and oftentimes, distress. The rhythmic line of the review process is usually scherzo

(rapid and hectic)

In the pulse of this process some performers get carried away

It should have been a non-substantive review

PLAN IMPLEMENTATION

In the matter of review activities concomitant with Plan Implementation, there is a new Certificate of Need (C/N) Law, effective July 1, 1979, which has raised the threshold of reviewable capital expenditures from \$50,000 to \$150,000. Any change in services, or any change in beds which relocates such beds from one physical facility or site to another (over a period of two years) by more than ten beds or ten percent of the total, licensed bed capacity, require a Certificate of Need review. A task force has been established for the purpose of drafting those rules which are necessary for the promulgation of the Certificate of Need Law. This is the same task force which developed the new Law.

The regulations for the Proposed Use of Federal Funds (PUFF) are now in hand. This gives the Montana Health Systems Agency the review and approval authority over such applications pertinent to the State of Montana.

As of the end of our third year, August 22, the regulations for Appropriateness Reviews have not been released. The HSA Appropriateness Review Committee has had education sessions on appropriateness, and sessions have been conducted for three hospital districts.

Agreements and activities related to Coordination are becoming increasingly important in all phases of plan development and implementation.

THE SCORE

Some of the sections understand that the Health Systems Plan is a document that is basic to these reviews, that criteria and standards must be followed to accomplish a concert of actions.

Other performers in the health systems do not contribute to an orderly development.

and our score continues like a ritual fire dance.

Such agreements and coordinative efforts are with the following:

Montana Professional Standards Review Organization

Montana Hospitals Rate Review System

Montana Health Planning & Development Agency

Governor's Office of Budget & Programs Planning

Department of Social & Rehabilitation Services

HSAs contiguous to Montana

End Stage Renal Disease Network

These agencies and organizations have been very supportive of HSA review activities and have added to understanding throughout the systems.

For the improvement of the quality of applications, the intent of the Health Systems Plan has been conveyed to potential applicants and reinforced through site visitations. The HSA staff works very closely with applicants requesting federal funds for health services and those applicants subject to Certificate of Need. This does not involve the actual writing of an application, but the technical expertise provided does improve the quality of the applications. These visits have resulted in improved cooperation and relationships with hospitals, nursing homes, and other health care providers, and improved understanding of the applicable review process. Site visits are conducted in consort with staff of the State Department of Health & Environmental Sciences.

THE SCORE

A climax has been reached in the third year, a gear of full performance with all parts of the systems contributing, coordinating and communicating.

And now, a brief time for reflections, a settling down. After all the production, some fruit borne, it's a cadenza almost like a cascade of falling leaves.

Once down,
at once, to rise again
but gently, softly --

CRESCENDOS AND CLIMAXES OF OPUS 3

In our third year one of the highpoints in our production was the realization of full designation as the Health Systems Agency for Montana. We had passed all of the performance standards, and as of October, 1978, could carry out all of the functions prescribed in Public Law 93-641 and defined in the regulations. Now our work could continue with a renewed vigor and interest.

Another climax was the Rural Health Manpower Conference staged by the Montana HSA in Great Falls on July 6, 1979. This conference was an outgrowth of AIP projects from the Eastern and Southwestern Subarea Advisory Councils. Through extensive news media contacts, newspaper, TV and radio, and the keynoting by Senator Max Baucus, a large crowd of 250 was in attendance. Included on the well-conducted program were:

"Overview of Federal Programs in the Health Field"

Aubrey M. Hall, Deputy Division Director and Regional Program Consultant, National Health Service Corps

"Emergency Medical Services Manpower"

James C. McShane, Director, Emergency Medical Services, Colorado Department of Health

"Regionalized Medical & Health Professional Education in Montana"

Franklin S. Newman, Director, WAMI Medical Program, Montana State University

"Applied Anthropology & Rural Health Care in Montana"

Sylvester L. Lahren, Jr., Project Director, Planning & Development of an Integrated Health Care Delivery System, Montana Planning District Six

THE SCORE

Tranquility -- we can have it, if reason prevails.
We need it for our own good health

"The Mental Health System"

Edward Kelty, Liaison, National Institute of Mental Health/Public Health Systems Agency, Rockville, Maryland

"Changing Concepts in Rural Health"

Irma T. Elo, Acting Director of Health Programs, National Rural Center, Washington, D.C.

"The Politics of Rural Health"

Montana Senator Max Baucus

"The Nurse Practitioner in Montana"

Panel Members:

Judy Gilman, Nurse Practitioner, Wolf Point
Eric Deeter, Administrator, Rural Health Initiative, Colstrip
Mark A. Johnson, M.D., Choteau
Larry Van Nostrand, Physician's Assistant, Great Falls
Zella Jacobson, R.N., Psychiatric Nurse Clinician, Great Falls

The conference was very well received and there were numerous requests for copies of the program's content. Two hundred and twenty-five copies of the transcript were distributed.

The third year also witnessed the introduction of the HSA monthly newsletter, **MONTANA HEALTH ROUNDUP**. In its first five months it has increased its circulation 100% to 1350 due to the numerous requests from individuals and organizations. It has served as a milestone in giving a feeling of importance and unity to all those working for and with the Health Systems Agency. It has provided the readers a statewide perspective.

THE SCORE

There are other areas remaining for ongoing debate including
technology - wellness

As in this musical demonstration, themes (concepts) can be treated, tempered, and massaged in many ways, sometimes simply, other times complexly. The Montana Health Systems Agency (at times in a unique circumstance) is striving, at all times, to accomplish its arrangements, by consensus, for an improved health systems in its health service area, Montana.

Montana Health Systems Agency is also expanding its public affairs and media relations efforts to enhance its image as an active organization working to meet the health care needs of Montana citizens. They are the public relations tools such as the statewide press kit and a list of HSA spokesmen to provide local comment and perspective in all of Montana's major media markets. The public will be well informed.

With the assignment of one staff member as liaison and support for each of the five subareas, relationships with council members and members of the public have improved. The liaison is requiring more participation and orchestration. In addition to the newsletter, all subarea council members are receiving all quarterly minutes of the HSA Governing Board and its committees. This gives everyone concerned a handle on the health situation presenting a new significance to the accountability which is emerging as the backbone of the subareas. Pervading the HSA, its Board, its committees, its councils, is better understanding of the law, its regulations, the functions, the responsibilities, and the processes. There is an increased awareness, better direction to staff for its planning and background for reviews. The summaries of the components are a "big plus." With the second generation of the Health Systems Plan firmly ensconced, there is now a full focus on implementation, particularly on the annual implementation plan. There are also some increasing conflicts demanding better clarifications, better communications and careful delineations of roles. But, then, conflicts are the hones that provide the polish in performance.

Over our third year there have been numerous meetings with representatives of Native American tribes and urban alliances. As a result of these meetings all of the tribes have been visited by staff of the Health Systems Agency with explanations of the HSA, its functions, roles, and responsibilities, and the receipt of Native American concerns about their health care needs. We have received a copy of the health plan of the urban alliances and will hear about the tribal health plans during the next HSA Governing Board meeting.

Health Systems Agencies can now feel a new sense of heightened credibility with the passage of Senate Bill 544 and H.R. 3917, the Health Planning and Resources Development Amendments of 1979. This will greatly assist the planning program in reaching maturity and beginning to fulfill the promises of Public Law 93-641.

And so with the final words of our annual report, the coda (the final notes) of our demonstration arrangement are written. We end our third year with a bit of a flourish, in recognition of the magnanimity of the 215 volunteers who gave so unstintingly of their time and efforts in carrying out the functions of the Montana Health Systems Agency.

They're not expecting any bouquets --

ONLY A ROSE
